What is **STEAM** and why is it important?

Research

Adding the **arts** to STEM
at Willamette

Why Add the arts?

- Emphasize cross-curricular learning:
 - critical thinking skills,
 - cooperative learning
 - technological fluency
- Integrating the arts in math 3X = student proficiency in math increased by 23%
- Nobel laureates in the sciences were 22 times more likely involved in the performing arts

Science is looking for **Answers**

+

Art is looking for **Questions**

=

Maker Spaces

so **S.T.E.A.M.** it is...

it's **interdisciplinary** - rather than
compartmentalized

its **connecting** - rather than disconnected

its **problem solving** - rather than regurgitative

its **thinking-based** - rather than mindless
conformity

its about **INQUIRY**- making up problems and
trying to solve them...leading to new
problems...

S.T.E.A.M. SCHOOL

1 Inquiry-Based
concept-driven

2 Project Based
real-world

3 Personalized
differentiated

4 Student-Directed

5 Collaborative
learning communities

6 Community-Connected

7 Interdisciplinary

8 Integrated with Nature

9 Technology-Infused

10 Safe and Secure

putting the **S.T.E.A.M.** in the river

S.T.E.A.M. – What’s it all About?

March 16, 2015 / 0 Comments / in District News, Superintendent Blog, Uncategorized, VCSTEAMN /

is learning that focuses on **science, technology, engineering, the Arts, and mathematics.**

The Rio School District is working to imbue STEAM learning in all our 8 schools in a variety of ways. In addition, we are in the planning process for constructing a new K-8 STEAM school that will combine architecture, curriculum, and instruction in innovative ways.

I could go on and on about the benefits of STEAM learning and STEAM schools, however, I thought it would be useful to provide some basic ideas to respond to the question; **Why STEAM?**

S..... Science learning in the past has often been de-contextualized and relegated to text book work. We think Science learning needs to include doing science, learning the history of science, developing an Inquiry Lens for life, and learning to use scientific perspectives for life-long problem solving.

T..... Technology attracts and engages learners. It can provide rich and speedy feedback. It too needs to be contextualized and “historicalized.” It needs to be put into the service of problem solving at local and global levels. It needs to break down institutional barriers to learning. It needs to empower learners. It needs to take into consideration the story of the Luddites.

E..... Engineering is a great and under-exposed field for young learners. It helps solve problems. It’s all about design, form, and function. It’s about the applied use of math/science, design, and technology which addresses the relevance of learning.

A..... Arts are about being human. We need to allow and teach learners to create art. Art leads to other things. Art separates man from beast. Art is often under-taught and usually includes the misconception that to be good at the arts it is all about what talent you are born with rather than what you learn and how hard you work. The same is true for mathematics.

M..... Mathematics is rarely taught in context. Math needs to be taught in ways that make it real to learners. Learners need to see math in action. They need to see the beauty and creativity in math work. They need to develop the right balance of procedural and conceptual understanding. All of these math learning opportunities are available in STEAM learning. STEAM learning can engage the math learner in their development as speakers of the universal language of math which is perhaps, the universal language of the universe or at least, the human mind.

Funding/Designing K-8 STEAM School

- 2Yrs Rio developed a Master plan
- Includes Ventura County's first K-8 STEAM school.
- District's enrollment growth & lack of capacity
- Neighborhood and community choice school
- This will be a “maker place.”

Project Schedule Summary for Rio School District Projects

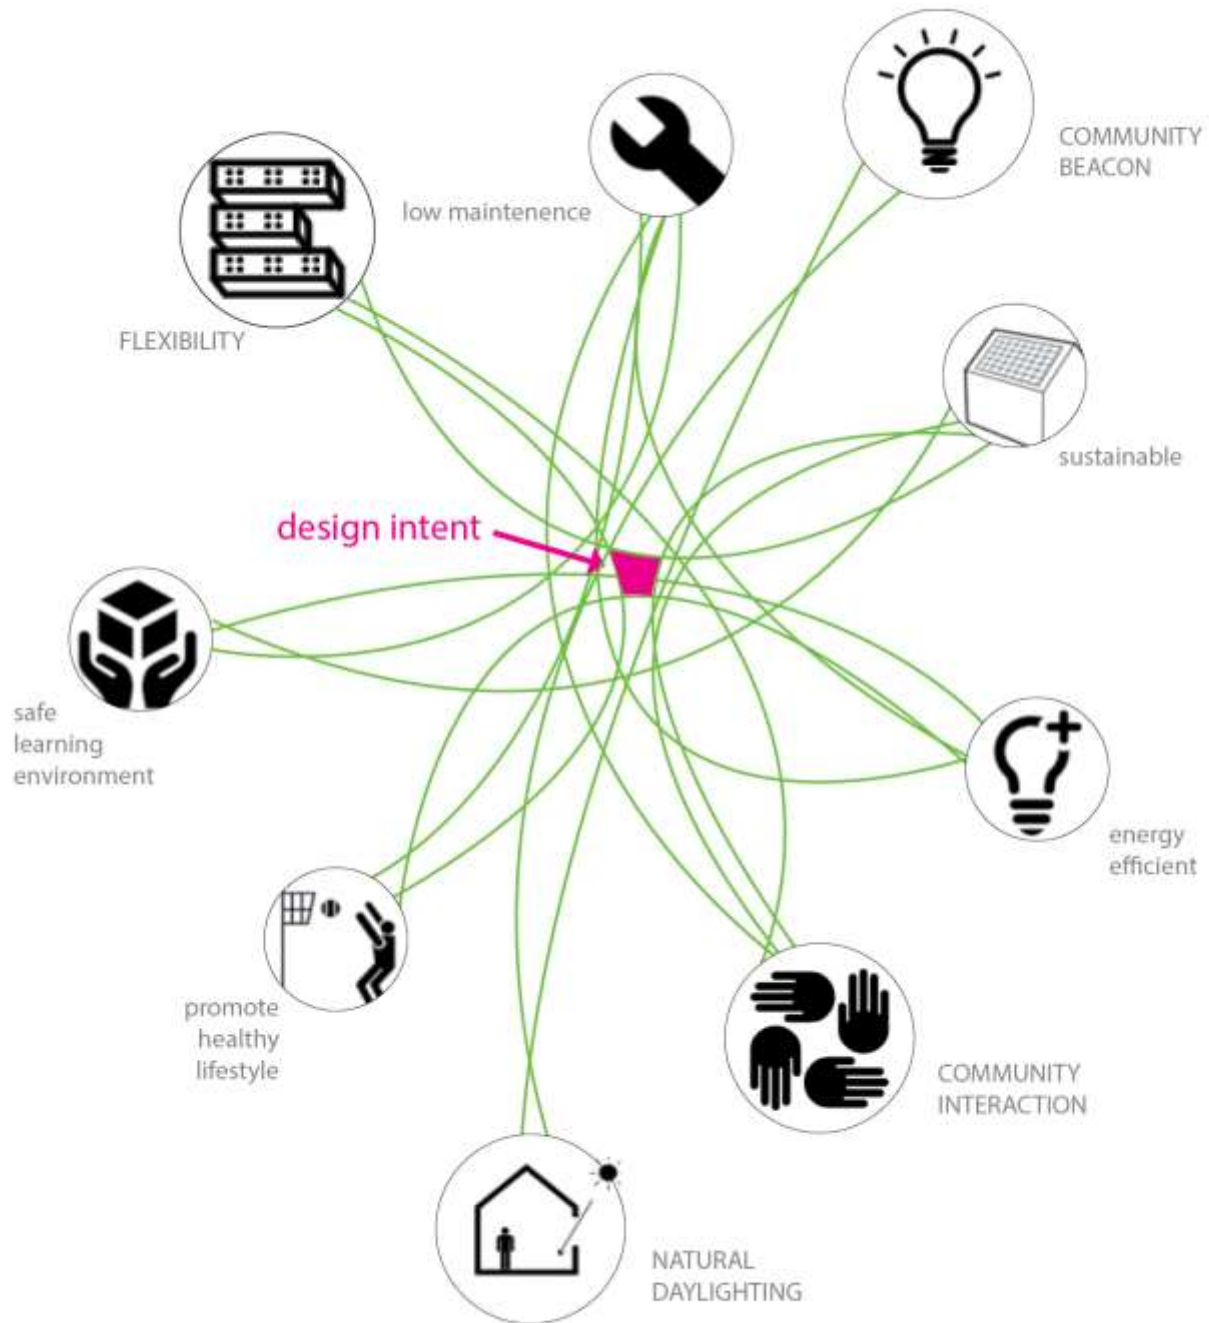

Funding/Designing K-8 STEAM School

Rio's Measure "G" School Bond was approved by the voters by more than 70%

Rio has established a STEAM School Design Committee that engages staff, parents, experts, and community partners

RIO SD K-8 COMMUNITY STEAM SCHOOL VISIONING

IDENTIFIED AT COMMUNITY PLANNING MEETING ON OCT. 30, 2014

1. How can a school have no barriers?

<u>Built Environment</u>	<u>Outdoor Environment</u>
Many windows: illusion of open space.	Easily accessible from any location.
Wide hallways & walk areas.	Many paths to travel around campus.
Low separations with transparency.	"Green" screens.
Natural lighting/skylights & fresh air.	Large open spaces.
Co-mingling areas & open space.	If fencing is required, create an inviting separation between fencing and outside.
Space & time for creating/exploration & communication.	Nowhere for a student to hide.
Classrooms meld into outdoors.	Feeling of openness.
Welcoming to the community.	Access to outside off-campus.
Spaces to be alone and together.	Outdoor classrooms for a variety of topics.

2. What makes a space life-changing, inspirational and memorable?

<u>Built Environment</u>	<u>Outdoor Environment</u>
Safe, comfortable spaces.	Fountains/water features, music.
Open, interactive, light, provokes curiosity, inviting.	Beautiful, connected with nature & the environment.
Detailed, hands-on.	Sustainable, self-sufficient; create own electricity.
Generates creativity, evokes a sense of flow and deep engagement, lose sense of time.	Changing wall or landscape.
Light, colors, shapes; visually stimulating.	Easy access to sunshine, fresh air.
Interactions of people and space; dynamic work spaces.	Areas for growing plants.
Feeling of security and freedom.	
Size - the bigger, the better!	
Open, clean space: students can fill it with their own ideas, thoughts, objects, decor, color; things that inspire wonder and questions.	

<u>Curriculum</u>
Promote access to the world & other classrooms.
Mission Statement/Sign: "Our campus has no barriers."
No curriculum restrictions.
Equitable technology in classrooms.
Access to teachers, work areas, other classes/grade levels.
All cultures/languages valued.
Physically / emotionally safe.
Multiple pathways of communication
Easy access to community resources thru technology, walking field trips, & equipment that encourages exploration.

<u>Curriculum</u>
Staff works as a team and cares.
Students are valued, respected.
Provokes active & critical thinking.
New ideas educationally/ideologically.
Learning while discovering/exploring.
Cutting-edge technology.
Project-based/problem-based curriculum.
Inspire students to come every day.
Connection to the future and to history; tied to the positives in the community.

3. What are the essential learning activities that students can engage in and collaborate on at each STEAM Center?

<u>Grades K-2</u>	<u>Grades 3-5</u>	<u>Grades 6-8</u>
The arts, music, experiments with multiple media; project-based learning is a must.	Engineering design/thinking. Designing/building/testing.	Design work that tests theories, example: use computer to design a bridge & calculate weight limit.
Small group activities; together on the floor.	Place for independent work, ability to spread out.	Math on the playground; building structures.
Dramatic acting/Reader's Theater.	Gardening.	Community-based learning; field trips, authentic learning experiences/service.
Cooking (math/measurement; -socializing)	Thought process involves multiple layers of thinking. Challenge Activities related to math/science.	Multi-disciplinary activities: history/math/science/English/geography combined with life skills.
Water & sand play, science experiments.	Environmental activities.	Activities that build social interaction/communication.
Building with blocks, legos; puzzles; drawing. Eye/motor skills.	Activities related to reading; sharing items read.	Money management skills thru activities.
Singing/music; "loud room" (soundproof?)		6-8 Students can teach
Outdoor exploration; interaction with plants and animals.		Wood Shop with tools.
Example: build a Lego Robot to achieve stated project goal.		
Language development; reading.		
Observing; learning to use various tools.		
Animal studies: hatching chicks.		
Presenting/performing; exploring, interacting, equipped with resources to conduct experiments.		
Quiet nooks, lofts.		
Open kitchen for viewing.		
Pulleys, levers		
Writing, building, reading, arts, mathematics, collaborative creative work.		
Interactive Museum: upper grades create Museum experiences based on a theme that changes every quarter. Lower grade students can create museum exhibits, too.

Learning Environment Configurations and Connections

Types of S.T.E.A.M. Centers by Grade Level

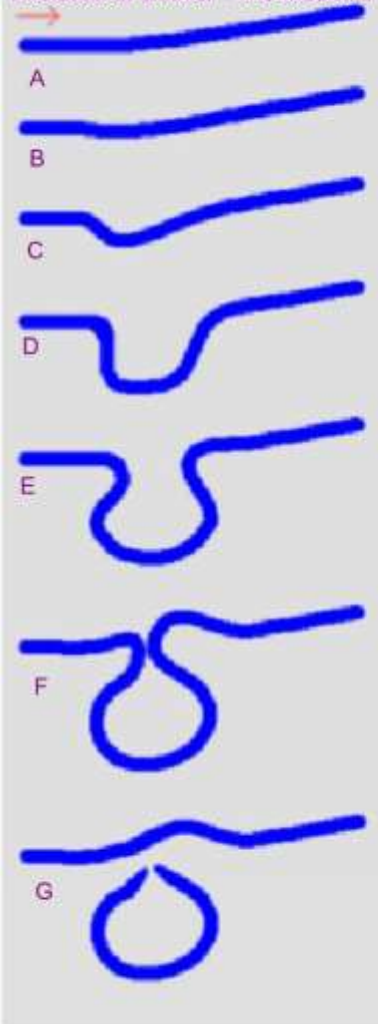

putting the S.T.E.A.M. in the river

Meander:
is a bend in
a **sinuous**
watercourse
or river.

Evolution of a River - The Meander

Concept Statement:

A meander is a bend in a sinuous watercourse or river. A meander forms when moving water in a stream erodes the outer banks and widens its valley. Using this metaphor, the "river" that runs through the site, erodes and creates the forms of the building around the central waterway. Over time, the meander takes different paths, evolving into various shapes. This concept is represented in the different types of spaces and STEAM centers – they follow a path based on developmental age similar to how students grow and their learning -like the meander- evolves.

The Educational Meander:

The RIO Community STEAM School will encourage innate learning and deep study in every aspect of its design. As students arrive on campus, they may see seventh and eighth-graders working on long-term projects, visually demonstrating the integration of science, technology, engineering, art and mathematics in a single endeavor.

The learning environments will flow naturally from one to another, like the neighboring river, encouraging students to move easily from lecture, to lab, to special project centers. Teacher supervision of all activities will be simple and direct, with clear lines of sight and few constructed barriers to impede the sense of openness.

The Meander will be evident outdoors, as students take a "walk of knowledge" with opportunities to stop along the way at outdoor classrooms.

A detailed architectural rendering of a modern educational facility. The main building features extensive green roofs and large glass facades. A prominent circular structure, labeled 'SCIENCE CENTER', has a wood-grain exterior. The campus includes a parking lot with several cars, landscaped walkways with trees, and a river or stream in the background. The overall style is a colorful, illustrative architectural drawing.
